## Summary

Solutions Engineer Intern (AI Apps) at Microsoft and Data Science graduate from Thomas More with hands-on experience turning customer problems into Azure AI App demos, technical validations, and solution paths. Skilled in Azure, AzureML/Foundry, pre-sales, AI/ML, Python, TypeScript, React, SQL, and DevOps. Fast-learning, customer-focused, and strong at bridging technical depth with business impact.

## Experience

### Solutions Engineer Intern (AI Apps / Data), Microsoft

02/2026 – 07/2026 | Zaventem, Belgium

- Supported enterprise customer solutioning across rail, manufacturing, banking, communications, and consulting accounts by shaping Azure AI architectures, validating technical approaches, and producing customer-ready assets.
- Delivered customer-facing Azure AI demos for RAG, MCP, agentic AI, Azure App Platform, and realtime voice scenarios, including events with 50+ researchers, 30+ hackathon participants, and 40+ frontier AI attendees.
- Built reusable solution accelerators Microsoft Foundry (GraphRAG), GitHub Copilot, MCP, realtime transcribe/translate, turning enterprise requirements into validated demos and deployable prototypes.
- Created internal skills/MCP tooling and field assets, including contact discovery workflows, infrastructure-as-code demo environments, GitHub templates, and architecture guidance.
- Produced Azure AI architecture guidance for enterprise stakeholders, covering GA vs preview capability selection, governance patterns, MCP/A2A usage, and agent implementation tradeoffs.
- Coordinated with Engineering teams to provide implementation guidance for new undocumented features (gpt-realtime-translate / gpt-realtime-whisper).

### Part-time Frontend & AI Developer, Pickit 3D

11/2025 – 02/2026 | Leuven, Belgium

- Improved global client interfaces for production facilities, core Pickit3D product.
- Designed and documented an AI-assisted troubleshooting RAG system to streamline support workflows.

### Frontend & Cybersecurity Intern, Pickit 3D

07/2025 – 09/2025 | Leuven

- Owned and modernized Pickit 3D's ThreeJS Camera Selector by redesigning the React/TypeScript UX, improving architecture and performance, and adding dynamic accuracy calculations from official 3D-camera documentation.
- Enabled Application Engineers & Sales to deliver faster visual customer guidance, increasing pre-sales engagement and reducing camera-selection support requests.
- Led migration from a shared company server to a dedicated LDAP instance with DevOps, deploying a custom Docker container to improve ownership and access control while enforcing TLS/SSL.

## Education

### Bachelor's degree, Data Science, Protection & Security, Thomas More University of Applied Sciences

09/2023 – 06/2026

- Magna Cum Laude (82%)
- Coursework includes software/web development, AI/ML, data analysis, data science, database management, cybersecurity and finance.

## Skills

### Solutions

Discovery, solution demos, requirements mapping, stakeholder enablement, (cross-team) collaboration

### Tech Stack

GitHub Copilot / CLI, Azure App & AI Platform, React, TypeScript/JavaScript, Python, SQL, NodeJS, FastAPI, AWS, GCP, Docker, Git/GitHub, Figma

## Languages

• English

• Dutch

## Projects

### Websites, github.com/aryxenv/websites

06/2026 – 06/2026

Created web-app slide deck framework from a hackathon concept for customer presentation delivery, supporting in-slide demos, interactive navigation, reusable React/Tailwind components, Copilot-assisted theming/authoring skills, GitHub Pages publishing, and local PDF/PowerPoint export via FastAPI and Playwright.

### GraphRAG Demo, github.com/aryxenv/graphrag-demo

03/2026 – 03/2026

Built customer-facing Microsoft AI Tour demo comparing vanilla RAG vs GraphRAG through a React/Fluent UI interface, FastAPI SSE backend, 3D knowledge-graph explorer, and guided build pipeline powered by Microsoft Foundry, Azure AI Search, GPT-4.1, and Bicep/azd deployment.

### Hosted Agent RCE Security Demo, github.com/aryxenv/foundry-rce-code-attack

04/2026 – 06/2026

Cross-team collaboration to engineer a secure-vs-insecure hosted-agent demo showing how prompt injection can abuse custom in-container code execution to bypass sanitized PostgreSQL access and leak fake PII through chart artifacts, then contrasted it with Foundry Code Interpreter sandboxing, managed identity, Bicep/azd infrastructure, and private Blob artifact delivery.

### AKS Agent Governance Toolkit, github.com/aryxenv/aks-agent-with-governance-toolkit

05/2026 – 05/2026

Deployed Microsoft Agent Framework weather agent on AKS with a FastAPI SSE wrapper, lightweight Fluent UI client, Kubernetes manifests, and an Agent Governance Toolkit policy sidecar enforcing deterministic tool controls for Nominatim/Open-Meteo weather lookups.
